Re: Buy American Act Requirements & LEED Requirements

Hollaender Manufacturing has been proudly manufacturing and fabricating railing in the United States since 1946. Design, engineering and manufacturing of all Hollaender products occurs in the United States and they meet all criteria for substantial transformation as outlined in the Buy American Act requirements. The U.S. Army Corps of Engineers, U.S. Department of Defense, National Park Service and other divisions within the U.S. federal government & state governments regularly specify Hollaender products. For additional information regarding Hollaender's products please visit: www.hollaender.com/technical/

In addition, a large portion of products manufactured by Hollaender Manufacturing can be claimed as LEED credits because Hollaender's Speed-Rail® fittings are manufactured from cast aluminum ingot, and are extremely high in post-consumer recycled content. The amount of credit can vary based on geography of the project. For more information regarding Hollaender's products please visit: www.hollaender.com/technical/certificates-of-compliance/
